

Leveraging Project Eye for Project Management & Visibility

Real Time Visibility on Project Status and Task Management for optimum utilization and Delivery

Overview

Project Goals

1. Create Ultra Usable Project Management and Tracking System
2. Optimal utilization of knowledge across projects.
3. Enhanced operational efficiency of the organization by reducing repetitive work.

Solution Offered

Spadework developed Project Management and Tracking System using MS SharePoint as technology component which collects, store and retrieve the knowledge from Knowledge Repository. SharePoint groups are formed to identify content as knowledge and categorization of knowledge. Also Reminders, Scheduling and alerts features were provided to enable project tracking and management.

The Business Case

Global Products Development Company was facing challenges with respect to having real time visibility regarding the status of their multiple projects. In many cases the project team members did not had clarity on the specific tasks that needed to be carried out by them on a daily basis.

The team members were unable to effectively harness the knowledge within their organization to fly past the roadblocks being faced in their current projects. There was also no one point source from which the employees could access the detailed information regarding the different projects

Solution

Spadework was chosen on merit by company to deliver the solution of creating Project Management and Tracking System as:

1. Spadework's record in successfully delivering SharePoint based Enterprise Management Solutions in Industry
2. Very strong experience in building SharePoint apps for cloud or on premise based applications
3. Expertise in creating highly intuitive UI and scalable applications on SharePoint platform
4. Matured processes for application development and delivery

Spadework team comprising of Sr. Business Analyst, Solution Architect, SharePoint Developers, Sr. UI Developers and Testers using UCSE

patented technology delivered solution for project management and tracking, capture knowledge created in projects under different functions, store the knowledge after due verification and validation using workflows, Share and collaborate in secured way.

Salient Features

- Improved project management and team productivity due to tracking and monitoring of project milestones as well as individual level tasks
- Increased team productivity due to the collaboration and knowledge management capabilities
- Allows easy access to all relevant information as it is a project repository of all ongoing as well as completed projects
- Higher adoption and usage due to the rich and interactive user interface.

Benefits

- Centralized and secure knowledge repository
- Optimal reutilization of knowledge base created within projects
- Project Management, sharing and visibility.

End-user satisfaction and customer delight

Mr. Steve Johnson,
Senior VP- Project Delivery
“We decided to use Project Management system to track individual milestones impacting project delivery timelines and also to create knowledge bank for data created in projects in the organization and share it. With tailor made features our project deliveries are on time.”

Technical Highlights

The solution has been developed using the latest technologies such as:

- **Microsoft Team Foundation Server**
- **Microsoft Office SharePoint Server 2007**
- **Microsoft Silver light 3**

Microsoft Project Plan and Visual Studio also constitute the solution. The Project Eye solution consolidates the data from many sources to add value.

The Microsoft Project Plan information is published in the TFS. The developer on completing his tasks updates the same in Visual Studio which gets updated in the TFS. The information from the TFS gets updated in the Project Eye solution.
