

Rich Interactive SharePoint Solutions

A recent survey carried out by the Nielsen group has found that improving the intranet usability has led to an average increase in intranet use by 106%.

Unleash the full potential of SharePoint for your organization

- **Increase in Organization Productivity**

The rich and interactive experiences increase the end-user productivity, on account of shortened time to accomplish a task. This leads to an overall increase in the organizational productivity and application adaptability amongst end-users.

- **Improved Collaboration through Rich Document Exchange Interface**

Navigating through mammoth of information on Intranet or Extranet is a tedious and cumbersome task in itself. Add to that the complexity of identifying the context and relevance to individual needs. This leads to abandonment of the portals and shrinks the revisit potential. However, Intuitive and Expressive document exchange interface creates compelling experiences that leads to increased revisits, collaboration and knowledge sharing.

- **Superior Performance through Integration of Rich Components**

Silverlight and Flash web parts integrated into SharePoint Portals help invoke corporate Brand and Style, Animations and Interactivity resulting in superior performance. Power of plug-n-play of these web parts assists in personalization.

- **Compelling User Experiences by leveraging the power of Web 2.0**

Features such as Collaboration Interactive Forums, Social Computing, Personalization and Customization, help corporations leverage the power of Web 2.0. Focused, contextual and relevant dissemination of news or information as per job roles or personal interests is a good example of Personalization.

Case Study

Knowledge Management System

Customer:

Client Challenge

- Tedious process for users to identify and collaborate with experts
- Poor User Experience
- Branding experience missing

Solution

SpadeWorx designed and developed Rich Interactive Intranet solution enabling ease of use, intuitive navigation and visual communication

Microsoft Silverlight based webparts added in the form of Navigator and Tracker features improved the productivity and enhanced the user experience

SpadeWorx transformed the User Interface to deliver a consistent branding experience

Benefits

- Better usability resulting in greater portal adoption
- Increased interaction between the users and the expert community
- Improved knowledge sharing that has resulted in faster problem resolutions

Rich User Experience for SharePoint includes:

- Contextual User Interface design and development
- Rich and Intuitive User Interactivity
- Effective Information Architecture
- Enablement of “Ease of use” by leveraging Innovative web-parts
