

Board the Microsoft's Windows Phone 7 Bandwagon in a Jiffy

T-Mobile, Sprint, Verizon, Vodafone, Orange, and many others are launching their models based on Windows Phone 7.

With already so much momentum in the industry, it is no surprise that all and sundry would be vying to have their applications compatible with this latest Mobile Platform and offer new applications that suit the fresh, tile-based UI. However, all is not exactly hunky-dory – there are **inherent challenges** to overcome before starting to develop new apps or to port existing apps to the new platform.

WP 7 cannot run applications written for earlier WINDOWS Mobile Platforms

No existing phone can be upgraded to this platform, thereby making it imperative to re-write the applications.

Applications compatible with the new UI Design Guidelines

Developing Rich and Interactive Applications based on Silverlight and new Tile-based UI is a shift from previous Application Development practices.

Build Apps offering superior Experiences

Developing highly responsive and performing applications on this latest platform, in an optimized manner, is a clear challenge.

Availability of Skilled Resources

Hiring resources with skills across various Mobile Platforms including the latest WP 7, Andoird, iPhone and Blackberry is a hard task at hand.

Achieving highly demanding Go-To-Market Timelines

Additional Tools & Techniques, beyond developer productivity, are a must to meet the challenge of aggressive Go-To-Market timelines, in order to be a front-runner in the competition.

Jet Start Your Windows Phone 7 Projects

Take advantage of our ready-to-use components that have been specifically built for WP 7 in bringing the dream Application to life.

Your time-cost investment
